

Transform SQL dataset into Pandas Dataset

1. You have to SQL download dataset , for example :
<https://www.kaggle.com/datasets/busiellmorley/worldcities-pop-lang-rank-sql-create-tbls>
2. You have to download XAMPP software :
<https://www.apachefriends.org/index.html>
3. Go to XAMPP control panel, start two thngs :
 - a. Apache (your we server)
 - b. MySQL (your Database)
4. After starting these two hit the url : localhost/phpmyadmin/
5. Create new database in that url , for example create new database (world)
6. Now import your SQL dataset to the world database which you downloaded from kaggle and you will get your table and their details
7. Now you can follow the step of the .ipynb file
